This collection provides detailed tracking data on when and where political ads aired during the year 2010. It covers all broadcast television stations in all media markets in the United States. Ads aired in U.S. Senate, U.S. House and gubernatorial races are also coded for their content.

DATABASES

The data collection comes in four different files:

1. wmp-federal-2010: contains information on all ads aired in House and Senate races
2. wmp-gov-2010: contains information on all ads aired in gubernatorial races
3. wmp-down-ballot-2010: contains information all ads aired in other races. Only information about when and where each ad aired is listed. The Wesleyan Media Project did not code these ads.
4. wmp-2010-spending: contains information on estimated spending on advertising

DATA COLLECTION AND CODING

The source for the ad data is Kantar Media/CMAG. This commercial firm specializes in providing detailed, real-time tracking information to corporate and political clients. These tracking data represent the most comprehensive and systematic collection on the content and targeting of political advertisements. The data include two types of information. First, frequency information tells when and where ads aired. It contains precise and detailed information on the date, time, market, station, and television show of each airing. Second, the data provide information about each ad’s content in the form of a video file for each unique creative or individual ad.
CMAG gathers such data by using a market-based tracking system, deploying “Ad Detectors” in each media market in the U.S. In addition to all local advertising activity, these detectors track advertisements on the major national networks, as well as national cable networks. The system’s software recognizes the electronic seams between programming and advertising and identifies the “digital fingerprints” of specific advertisements. When the system does not recognize the fingerprints of a particular spot, the advertisement is captured and downloaded. Thereafter, the system automatically recognizes and logs that particular commercial wherever and whenever it airs. Studies that examine advertisers’ “buy sheets” obtained from television stations and compare them with this CMAG data find that the company’s system is highly reliable in tracking the universe of ads aired.

After receiving the data from CMAG, the Wesleyan Media Project processes and codes the ad tracking data from all media markets in the United States. In this process, using videos of ads captured by CMAG, project staff first research the entity responsible for airing each political spot, distinguishing between those paid for by candidates, parties, and interest groups. Finally, the Wesleyan Media Project codes the content of each ad on an extensive battery of questions using a web-based content analysis platform called Academiclip, a CommIT media research application.

A NOTE ABOUT THE DATA

The Wesleyan Media Project is providing these data as a courtesy to the academic community, and not as a polished commercial product. The nominal fee you pay is for administrative expenses. We've worked hard to clean the data that we've coded, but as with all datasets this large, there may be some errors that remain. For CMAG variables marked with an asterisk below, WMP corrects errors as we find them, but we don’t *systematically* review/clean these variables. All other CMAG variables are not cleaned at all by WMP. We do not have information on how CMAG variables are collected/coded.

We have included an extensive list of coding variables with this public release, even those that have extremely low frequency in the data. Depending on resource availability, we do occasionally update the data files to correct errors and issues brought to our attention by users. If you notice issues with the data, feel free to share the information with us at mediaproject@wesleyan.edu.
